

1. A telescopic stage device comprising: a first support member; a second support member; and a third support member; said second support member and said third support member each being of a shape and size to be telescopically retained within said first support member, each said support member having attachment means for removably interconnecting each said support member together, each said support member being adjustably supported from an overhead structure by suitable support means, said support means being removably attached to each said support member, each said member includes at least one internal compartment for containment of at least one or multiple rods with each said compartment being in open communication with each other, said at least one or multiple rods being used to support an elongated sheet of material thereon, said at least one or multiple rods being independently operated by multiple prior art drive motors, said drive motors being housed within multiple compartments located within said first support member, and each said support member having additional compartments for containment of numerous accessories,

whereby:

said support means and each said support member are

independently operable between various up or down positions. ^{when the attachment means is disconnected.}

2. The telescopic stage device of claim 1 wherein each said support member having ^{said} attachment means for removably interconnecting each said support member together includes either bolts, nuts, hinges, pins, or a combination thereof.
3. The telescopic stage device of claim 1 wherein each said support member having ^{said} attachment means for removably interconnecting each said support member together includes an elongated insert which is slidably engaged within a cavity, and said cavity being formed between each said support member when each said support member is in alignment with each other.
4. The telescopic stage device of claim 1 wherein said support means is cables, said cables having attachment means for removably attaching said cables to said overhead support structure and each said support member.
5. The telescopic stage device of claim 1 wherein said elongated sheet of material is in the form of either a curtain, a scenic backdrop, a projection screen or a combination thereof.
6. The telescopic stage device of claim 1 wherein said numerous accessories include either explosives, laser

lights, disco lights, confetti, fireworks, a fluid such as water, flowers, balloons, smoke, fire, streamers, speakers, sound effect devices, or a remote controlled blimp.
